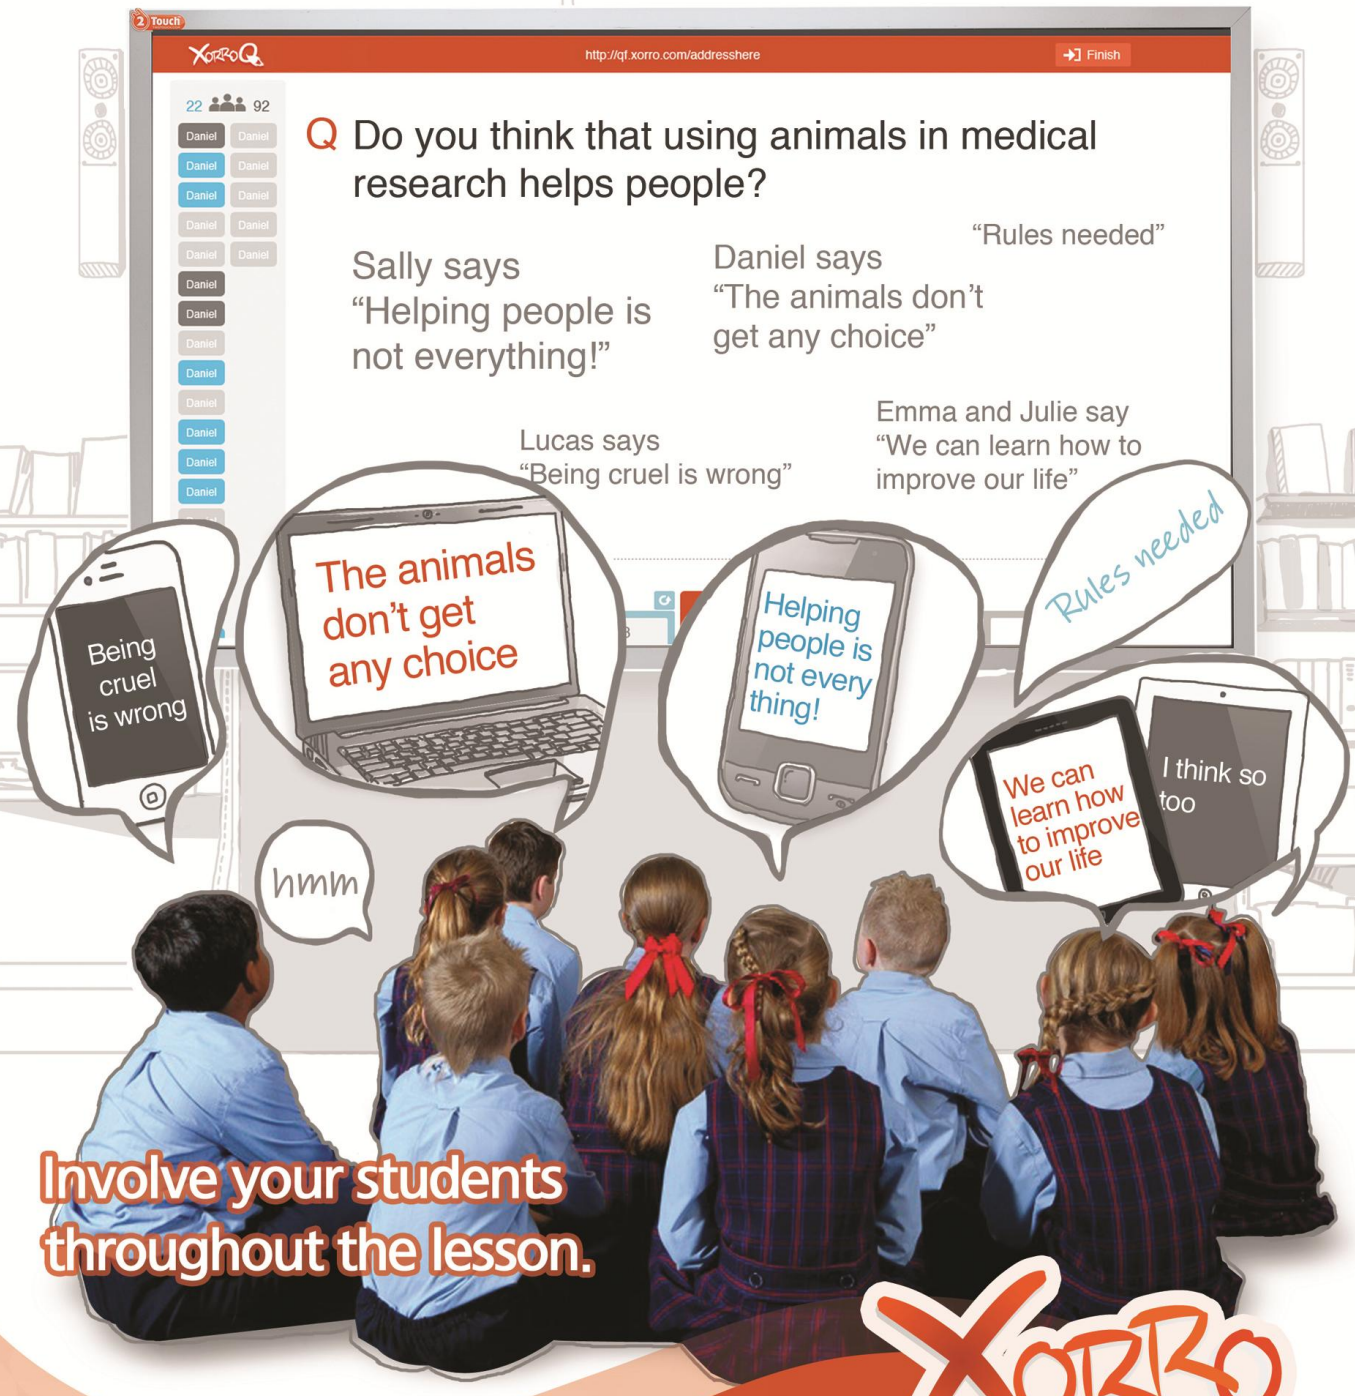
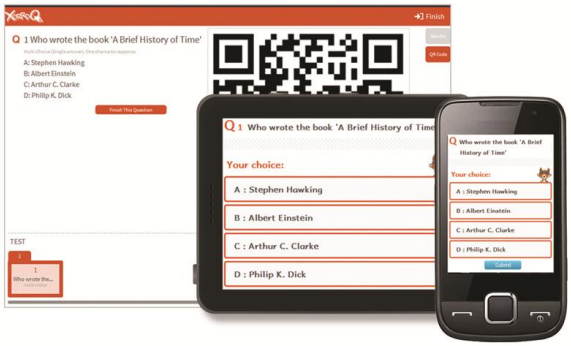
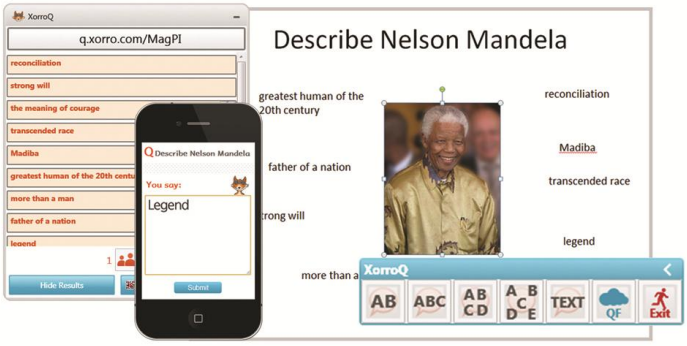
Collaboration in Learning



Xorro.com

XorroQ is the learning response solution that encourages students to express ideas and opinions via a tablet PC, smart phone, or laptop. Students can respond instantly to a teacher's question, providing immediate in-class feedback and encouraging student-led discussion.





Instant/Any-time

XorroQ makes it easy to create questions prior to, or during a lesson.
Educators can create multi-choice questions for assessment, or open-ended questions that necessitate full text answers.

Bring your own device

XorroQ makes use of existing student devices such as tablet PCs, smart phones, and laptops; allowing for multi-platform classes (Windows, Mac, Android) to engage in the same session.

Easy to use

XorroQ takes virtually no time to setup. With no download required or special app to be purchased, students simply login using their device's web browser or QR code reader.

Integrate with existing software

The Q-Launch floating toolbar provides for easy XorroQ integration with your existing software. XorroQ can be used in combination with any programme and provides for answer dragging onto PowerPoint, and IWB software.

Web facilitator / Results

XorroQ saves all results onto a personalised webpage where educators can review and export results, view a live question session, create new quesions, and edit student lists.

Multiple locations

XorroQ sessions are not restrained to the classroom, with participants in multiple places able to engage in the same session. Teachers can also run sessions outside of lesson time for homework, field trips, or exam revision.

Involve every student

Student responses can appear anonymous to the class, creating a safe response environment.
