

COLLABORATION IN LEARNING

Engage - Involve - Achieve - Learn

Better education

ins... access

Towards an inter-operable world

Import, open, convert, save, export

2Touch Workbook opens documents created using other IWB software, enabling inter-operability between differing interactive solutions. We give educators access to use and edit resources from the largest global communities.

Use with any IWB

Workbook is licensed for use with any hardware, maximising flexibility for educators.

Deploy instantly

The tiny installer for 2Touch Workbook makes downloading and installing a moment's work. Administrators love Workbook's low-impact non-intrusive design. Once installed, Workbook's "footprint" consumes minimal resources. Workbook is readily deployed over a network.

Customise to your needs

Every educational setting is different. Workbook can be optimised to provide preferred tools, utility launches, resource links, layouts and behaviours. This is key to achieving a more relevant, spontaneous, student-centred learning experience in the classroom.

Access resources as needed.

Hide or expand sections on command.

When brainstorming, apply ink annotations as text to map.

concept mapping

Workbook's integrated concept mapping allows objects (including multimedia and web) to be visually associated with each other.

flexible

customisable

involve

multimedia

web

"white boarding"

The spontaneous act of expressing a group's output visually on a shared surface.

Involving everyone

Workbook's multi-user functions allow users to work at the canvas simultaneously. Now, integrated Xorro-Q allows users to interact with the shared surface from their desks.

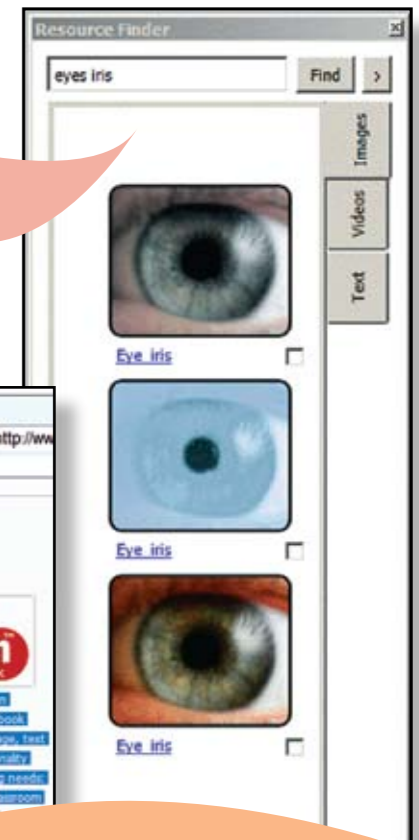

Working with video

Play videos (including You-Tube and live feeds) right on the canvas. Take snapshots, annotate etc while videos play.

Resource Finder

Rather than forcing users to download large libraries, Workbook's unique Resource Finder canvases the internet for your images, videos and interactive media. Resource Finder filters ensure that only appropriate content with copyright permissions are offered for use.

Harnessing the internet

Workbook's integrated browsing means web activities and pages are seamlessly accessed on the canvas. This makes drag-and-drop to canvas simple! Use live feeds in lessons; perform parallel web inquiries on multiple browsers; work collaboratively on the same shared canvas.

Browser on canvas

Download 2Touch Workbook from update.twotouch.com.

twotouch.com

The 30 day free trial converts to a permanent licence on activating Workbook. 2Touch IWB customers are entitled to free site-wide activation.

2Touch Workbook now incorporates Xorro-Q enabling students to participate from their seats, using any browser-enabled device to answer questions or send text to the current page.

Benefits:

Collect & share instantly

Teachers can call for opinions, collect votes, assess understanding and share contributions selectively with the class. All data can be downloaded for later analysis.

Involve every student

Students can answer questions posed by the teacher, and have their contributions shared with class. Teachers can make responses anonymous.

Use student supplied devices

Mobile phones, tablets, laptops... anything with a browser can use Xorro-Q.

Leverage distributed devices to win freedom from proprietary technologies.

Multiple locations

Share the display and voice, and participants from anywhere can contribute through their browsers.
